LIST OF CONTENTS

NUMBER 1

D. Lakehal and **F. Thiele** 1 Sensitivity of turbulent shedding flows to non-linear stress–strain relations and Reynolds stress models

Jörn Sesterhenn 37 A characteristic-type formulation of the Navier–Stokes equations for high order upwind schemes

Jens N. Sørensen and **Per J. Nygreen** 69 Unsteady vorticity–streamfunction algorithm for external flows

Virginie Daru and **Christian Tenaud** 89 Evaluation of TVD high resolution schemes for unsteady viscous shocked flows

Saeed Orangi, M. R. Foster and **R. J. Bodonyi** 115 On the structure of a three-dimensional compressible vortex

NUMBER 2

Hong Luo, Joseph D. Baum and **Rainald Löhner** 137 An accurate, fast, matrix-free implicit method for computing unsteady flows on unstructured grids

J. R. Carlson, N. Duquesne, C. L. Rumsey and **T. B. Gatski** 161 Computation of turbulent wake flows in variable pressure gradient

Ekkehard Holzbecher 189 On the relevance of oscillatory convection regimes in porous media – review and numerical experiments

T. Farrant, M. Tan and **W. G. Price** 211 A cell boundary element method applied to laminar vortex shedding from circular cylinders

Jinsoo Cho and **Younhyuck Chang** 237 Supersonic flutter analysis of wings using an unsteady 3D panel method

NUMBER 3

S. W. Coppen, V. P. Manno and **C. B. Rogers** 257 Turbulence characteristics along the path of a heavy particle

O. S. Galaktionov, P. D. Anderson, P. G. M. Kruijt, G. W. M. Peters and **H. E. H. Meijer** 271 A mapping approach for three-dimensional distributive mixing analysis

T. G. Liu, B. C. Khoo and **K. S. Yeo** 291 The simulation of compressible multi-medium flow. I. A new methodology with test applications to 1D gas–gas and gas–water cases

T. G. Liu, B. C. Khoo and **K. S. Yeo**	315	The simulation of compressible multi-medium flow II. Applications to 2D underwater shock refraction
X. Yuan and **H. Daiguji**	339	A specially combined lower–upper factored implicit scheme for three-dimensional compressible Navier–Stokes equations
M. Cheng, G. R. Liu and **K. Y. Lam**	365	Numerical simulation of flow past a rotationally oscillating cylinder

NUMBER 4

M. Manna and **A. Vacca**	393	Scaling properties of turbulent pipe flow at low Reynolds number
C. Pozrikidis	417	Three-dimensional oscillations of inviscid drops induced by surface tension
G. B. Deng, J. Piquet, X. Vasseur and **M. Visonneau**	445	A new fully coupled method for computing turbulent flows
Y. J. Moon and **S.-R. Koh**	473	Counter-rotating streamwise vortex formation in the turbine cascade with endwall fence
E. Serre and **J. P. Pulicani**	491	A three-dimensional pseudospectral method for rotating flows in a cylinder
	I	First announcement and call for papers

NUMBER 5

Special Issue
Asian Computational Fluid Dynamics Conference

Editor: S. G. Rubin

S. G. Rubin	521	Preface
P. Moraes Jr. and **A. Morgenstern Jr.**	523	Evaluation of the effectiveness of VLS launcher flame deflector
A. Das and **J. Mathew**	533	Direct numerical simulation of turbulent spots
J. Mathew and **A. J. Basu**	543	An economical method for direct numerical simulation studies of transitional round jets
R. Friedrich, T. J. Hüttl, M. Manhart and **C. Wagner**	555	Direct numerical simulation of incompressible turbulent flows
C. Wagner, T. J. Hüttl and **R. Friedrich**	581	Low-Reynolds-number effects derived from direct numerical simulations of turbulent pipe flow

T. J. Hüttl and **R. Friedrich**	591	Direct numerical simulation of turbulent flows in curved and helically coiled pipes
L. Agrawal, J. C. Mandal and **A. G. Marathe**	607	Computations of laminar and turbulent mixed convection in a driven cavity using pseudo-compressibility approach
V. Ramesh and **S. M. Deshpande**	621	Least squares kinetic upwind method on moving grids for unsteady Euler computations
	I	Announcement

NUMBER 6

F. Alcrudo and **F. Benkhaldoun**	643	Exact solutions to the Riemann problem of the shallow water equations with a bottom step
F. Togashi, K. Nakahashi, Y. Ito, T. Iwamiya and **Y. Shimbo**	673	Flow simulation of NAL experimental supersonic airplane/booster separation using overset unstructured grids
R. C. Mehta	689	Comparative study of surface pressure fluctuations over bulbous heat shields at Mach number = 0.95
J.-S. Wu and **K.-C. Tseng**	711	Analysis of micro-scale gas flows with pressure boundaries using direct simulation Monte Carlo method
Z. Ahmad and **U. C. Kothyari**	737	Time-line cubic spline interpolation scheme for solution of advection equation
A. Cabal, J. Szumbarski and **J. M. Floryan**	753	Numerical simulation of flows over corrugated walls
	I	First announcement and call for papers

NUMBERS 7–8

Speical Issue
A Tribute to Dr Richard Beam and Dr Robert Warming

Guest Editors: M. Hafez and D. Kwak

M. Hafez and **D. Kwak**	777	Preface
M. Hafez	779	Contributions of Richard Beam and Robert Warming to Computational Fluid Dynamics
D. Lee, R. M. Beam and **R. F. Warming**	783	Supercompact multiwavelets for flow field simulation

W. R. Briley and **H. McDonald**	807	An overview and generalization of implicit Navier–Stokes algorithms and approximate factorization
C. Kiris and **D. Kwak**	829	Numerical solution of incompressible Navier–Stokes equations using a fractional-step approach
J. L. Thomas, B. Diskin and **A. Brandt**	853	Textbook multigrid efficiency for the incompressible Navier–Stokes equations: high Reynolds number wakes and boundary layers
A. Rezgui, P. Cinnella and **A. Lerat**	875	Third-order accurate finite volume schemes for Euler computations on curvilinear meshes
V. Kovenya, S. Cherny, S. Sharov, V. Karamyshev and **A. Lebedev**	903	On some approaches to solve CFD problems
R. W. MacCormack	917	Iterative modified approximate factorization
P. K. Khosla and **S. G. Rubin**	927	A review of strongly coupled algorithms for viscous flow problems
D. A. Caughey	939	Implicit multigrid computation of unsteady flows past cylinders of square cross-section
P. E. O. Buelow, S. Venkateswaran and **C. L. Merkle**	961	Stability and convergence analysis of implicit upwind schemes
C. Tang and **M. Hafez**	989	Numerical simulation of steady compressible flows using a zonal formulation. Part I: inviscid flows
C. Tang and **M. Hafez**	1003	Numerical simulation of steady compressible flows using a zonal formulation. Part II: viscous flows
